February 2014

**Nathan Wolfe is the 2014 Posey Leadership Award Recipient**

On March 20 Austin College welcomes Dr. Nathan Wolfe to Dallas as the recipient of the 2014 Posey Leadership Award. Join us at the Perot Museum of Nature and Science to hear Dr. Wolfe at the Austin College Global Outreach GO! Forum. His work as a pioneering epidemiologist--researching the transmission of deadly viruses similar to HIV or SARS--could prevent such threats from emerging as the next pandemic.

"With epidemics, people have been standing on the shore, waiting for the gusher to hit the ocean. But to prevent epidemics, you have to look at the various little sources that feed into the river." - Nathan Wolfe

Wolfe has spent years tracking viral hot spots in the jungles of Africa and Southeast Asia and building a disease forecasting system to protect the lives of millions. The 43-year old scientist, named to TIME's list of most influential people in 2011 and a National Geographic Emerging Explorer in 2011, and is the author of *The Viral Storm: The Dawn of a New Pandemic.*
